

# Archon GoSilent Cube

The world is listening. GoSilent.

## Security Made Simple

Archon GoSilent Cube is compatible with any IP-enabled device (no matter how old) and effective over any connection (no matter how public) with near zero configuration required. Security so simple, "it just works."

### Anyone Can Use It

The GoSilent Cube hardware VPN can be set up in just minutes with simple plug-and-play functionality. No technical administrator is required to set or configure the device.

Preset to block all inbound traffic and allow only device-established connections.

### Secure Over Any Connection

Even the least secure connections become incredibly secure. Captive portals are riddled with vulnerabilities and intercept the connection between the user and website they are trying to visit. GoSilent protects you even on these connections.

**Captive Portal Isolation:**  
GoSilent Cube is the only solution in the world that isolates captive portals.

### Secure Multiple Devices Simultaneously

Create a cost-effective solution to secure a large number of active devices simultaneously. Securely connect between 5-30 devices at a time with a single GoSilent Cube.

Tested on up to 5 concurrent WiFi devices (LAN) and 30 concurrent ethernet devices (LAN).

**VPN Type:** IPsec

**VPN Mode:** Tunnel

## Connect from Anywhere

You don't need to worry about where you're connecting from geographically or physically, when combined with our GoSilent Global servers.

**IP Obfuscation:** Creates invisible network traffic, and hides identity and location.

## Outfit Any IP-Enabled Device

Connect and secure any device that works with an IP address. GoSilent Cube is completely network, platform, and operating system agnostic.

**Network Interfaces:** 2 x 1Gb Ethernet on RJ45, 2 x Wi-Fi (2.4 & 5 GHz)

**Tested on up to 30 concurrent WiFi Hotspot range:** Approx. 400 sq ft.

## Top Secret-level Security

Rest assured that your device will be secured using the most advanced methods to date. Built to adhere to even National Security standards, GoSilent protects your data to the highest levels.

**Commercial National Security Algorithms (CNSA) Level Cryptography**

IKEv1 with pre-shared keys (quantum-resistant), and IKEv2 with certificates (with mandatory support for NAT traversal)

### CSfC-Approved

GoSilent delivers a CSfC-certified, plug-and-play security solution for classified and unclassified communication when using the public Internet.

### NIAP-Certified

Approved by the government for use in National Security Systems to handle classified data for the DoD, the Intelligence community and any DoD contractors or affiliates.

### CNSA Encryption

Built with Commercial National Security Algorithm Suite (CNSA)-level encryption, the most secure encryption solution in the marketplace.

### FIPS-Compliant

Approved for use by the federal government departments that collect, store, transfer, share, and disseminate sensitive but unclassified (SBU) information.
